PROJECTS

Object Detection and Tracking With Voice Feedback:

Object detection and tracking with voice feedback is a cutting-edge technology that leverages computer vision and deep learning algorithms to identify and track objects in real-time while providing voice feedback to users. This technology has the potential to revolutionize various industries, including security, surveillance, robotics, and automation.

Object detection and tracking with voice feedback system using the YOLOv7 object detection algorithm and the PyTorch deep learning framework. The system will use a camera to capture real-time video footage and process it using the YOLOv7 algorithm to identify and track objects of interest. The system will also provide voice feedback to users using text-to-speech technology to alert them to the presence of detected objects.
